L3 ANSWER 1 OF 2 CAPLUS COPYRIGHT 2002 ACS

AB Processes for the prodn. of polysaccharide ethers, e.g. cellulose hydroxyethyl ether, are disclosed wherein salts formed after the swelling and neutralization of the process, e.g., sodium nitrate or sodium acetate, are converted to their corresponding acids and bases by means of an elec. current, preferably in combination with a bipolar membrane and suitable cation and/or anion membranes. The acids and bases recovered from the

processes can be recycled, thereby avoiding the need to provide for disposal of the salts.

L3 ANSWER 2 OF 2 CAPLUS COPYRIGHT 2002 ACS
AB Expts. on diln., addn. of acid, neutralization, and addn. of neutral salt to the free acid soln. that is obtained by **electrodialysis** of the Na salt of cellulose glycolic acid ether were made. Their pH values were measured at 25.degree. by using the quinhydrone electrode, and their electrolytic dissocn. was observed. There is a linear relation between the pH value and the log of the concn. of the sample. The adaptability of
Kern's dissocn. formula, which shows the relation between mean dissocn. exponent pK and pH value, was examd.

L2 ANSWER 69 OF 214 CAPLUS COPYRIGHT 2002 ACS
AB The recovery and sepn. of aliph. acids formed from carbohydrates during the delignification of wood by the sulfate process is characterized by that the amts. of liquor in the digester is reduced when the ratio between the dissolved lignin and the aliph. acids from carbohydrates reaches a min. The amt. of cooking liquor that is withdrawn is controlled, so that the inorg. salts, which are formed during the subsequent acidification (by H2SO4 or HCl) for the pptn. of lignin, are usable, either completely or partially, as make-up chems. or in the bleaching, without upsetting the material balance of the process. The extractables, e.g., crude soaps, are sepd. from the liquor. before the lignin sepn., and part of the lignin is already removed by carbonation before the acidification. This method is esp. useful in the sulfate-digestion of pine and birch wood. Using the 2-stage process (CO2 and H2SO4) the amts. recovered from pine wood were: lignin 17.2 + 5.5, hydroxy acids 5.4 + 2.5, HCO2H 0.4 + 0.5, HOAc 0.9 + 1.1, and Na 8.4 + 4.0, vs. 22.8, 3.0, 0.4, 1.1, and 7.1 kg per 1081 kg liquor removed, resp., for the single-stage (H2SO4) process.

AB Cl(g), NaOH, and NaClO for treatment of sewage or pulping wastewater are manufd. by **electrodialysis** of a NaCl soln. in a cation compartment using a cation exchange membrane to obtain Cl(g) and NaOH, followed by reaction of 5-70% of the NaOH (as soln.) with a portion of

the Cl(g) to obtain a NaClO soln. (pH 9-13). Thus, 21 L/h of 4.6N NaCl soln. was electrodialyzed in a 5-cell basin to obtain Cl(g) and a NaOH soln., and 29% of the NaOH soln. was withdrawn continuously to react with a portion of the Cl(g). The products were 0.8 kg Cl/h, 68 L 0.6N NaOH soln./h, and 95 L 0.6N NaClO soln./h.

L2 ANSWER 135 OF 214 CAPLUS COPYRIGHT 2002 ACS

AB The solns. contg. org. and inorg. materials are 1st treated in a ultrafiltration device having semipermeable membrane and subsequently treated in an **electrodialysis** app. having an ion-exchange membrane. In the 1st process, the solns. are sepd. into a concd. soln. and a diffusate; the diffusate is then treated by the 2nd process in presence of elec. current to remove ions. This method allows purifn. and recycling of water and recovery of metals and org. compds. Thus, a spent electrocoating soln. contg. anionic coating materials was treated by ultrafiltration at 26.degree., 3.5 kg/cm2 pressure through a acetyl **cellulose** [9004-35-7] membrane. A concd. soln. contg. .apprx.99% of the coating materials and a diffusate contg. Ni2+ 3-5, Fe2+ 1-2, Zn2+ 5-6, CrO42- 6, and PO42- 7 ppm were obtained. The diffusate was dialyzed at 2.0 A/dm2 elec. current in an **electrodialysis** device with anion-exchange membrane having sulfonate group and cation-exchange membrane having tert-ammonium group. The ion concns. in the resulting water are decreased to .ltoreq.2 ppm. The water can be recycled and the coating materials in the concd. soln. may be reused in the electrocoating bath.

L2 ANSWER 196 OF 214 CAPLUS COPYRIGHT 2002 ACS
AB Expts. on diln., addn. of acid, neutralization, and addn. of neutral salt to the free acid soln. that is obtained by **electrodialysis** of the Na salt of **cellulose** glycolic acid ether were made. Their pH values were measured at 25.degree. by using the quinhydrone electrode, and their electrolytic dissocn. was observed. There is a linear relation between the pH value and the log of the concn. of the sample. The adaptability of Kern's dissocn. formula, which shows the relation between mean dissocn. exponent pK and pH value, was examd.
